

Bow_Secure Wifi: Connect a Personal Windows PC:

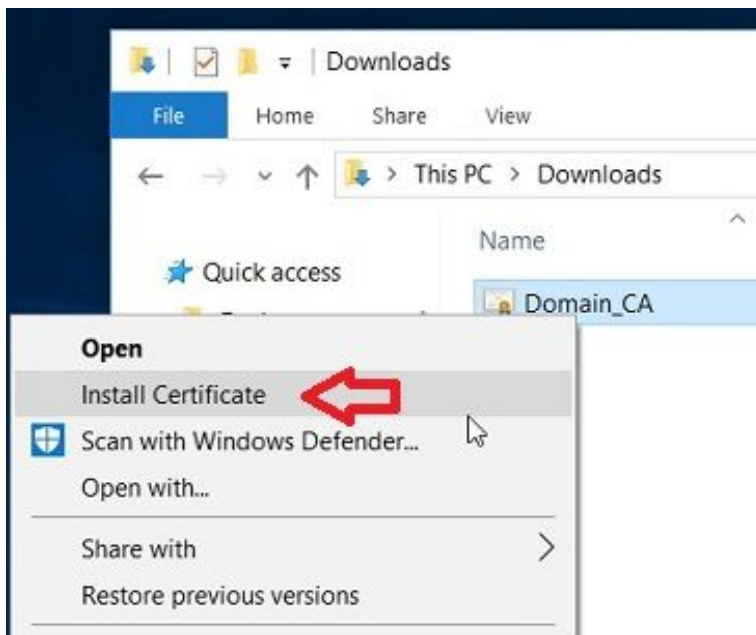

1: The first thing you'll need to do is download the certificate needed to connect to the new Bow_Secure Wifi network and install it.

Find the certificate here: https://sites.google.com/a/bownet.org/bow_securewifi/

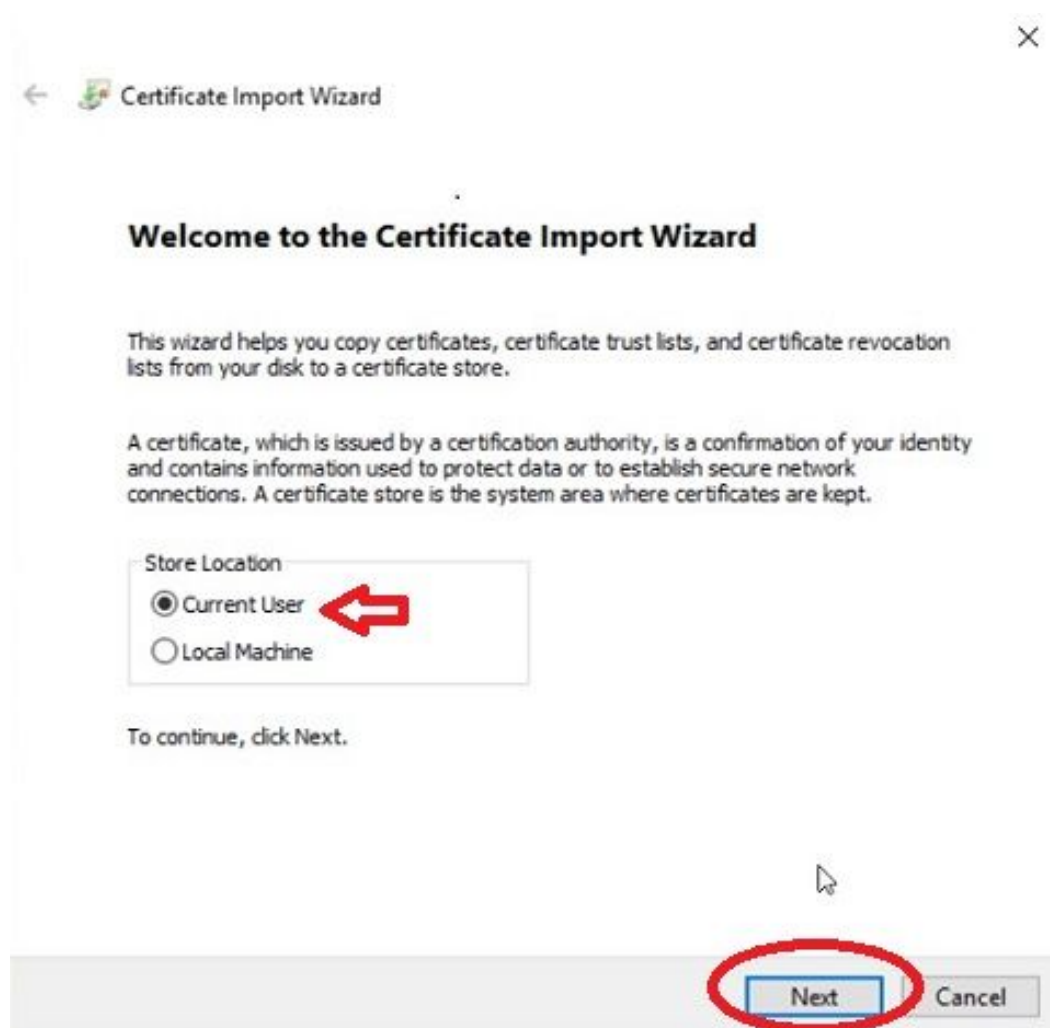

Once downloaded locate the certificate in your downloads folder.

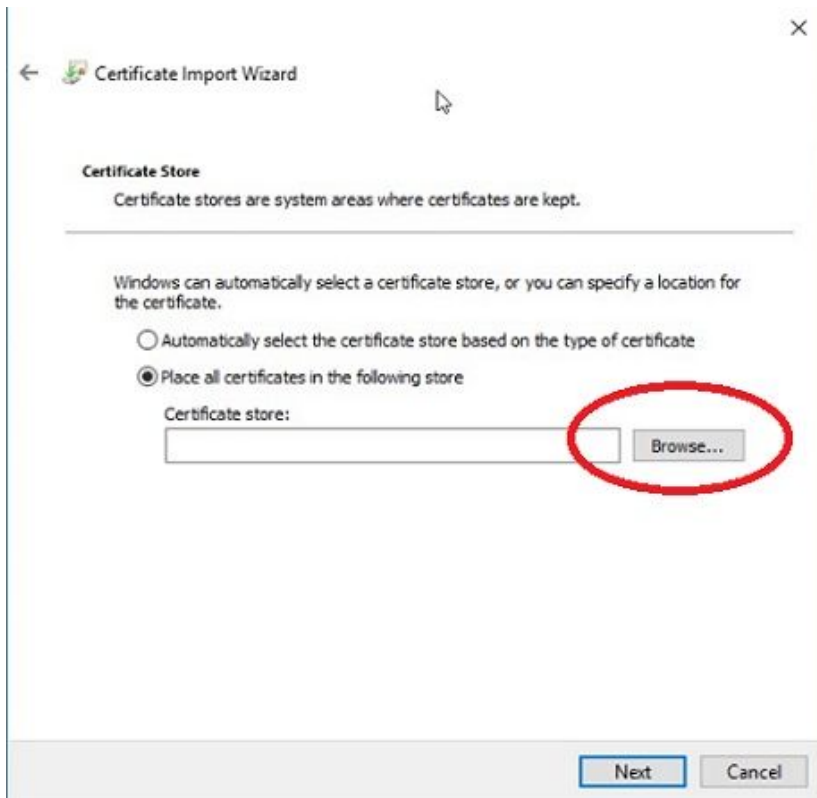

2: Next right click on the certificate and select "Install Certificate".

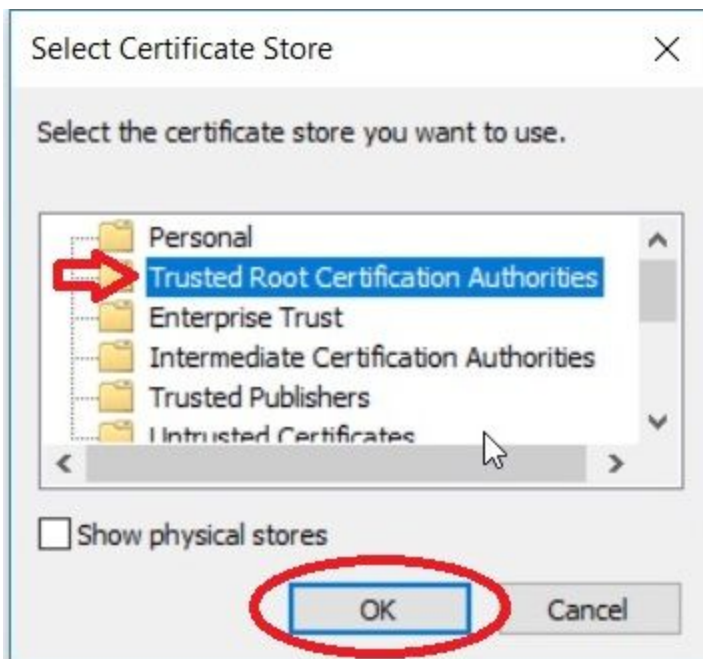

3: The certificate import wizard window will open. Make sure you select Current User then choose next to proceed.

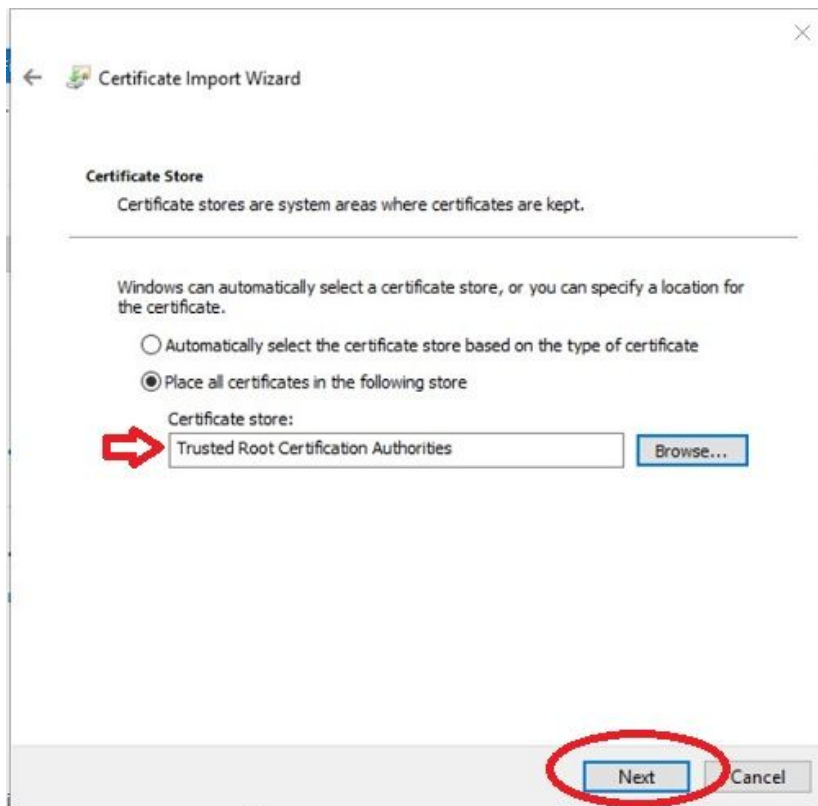

4: Next select place all certificates in the following store and choose browse.

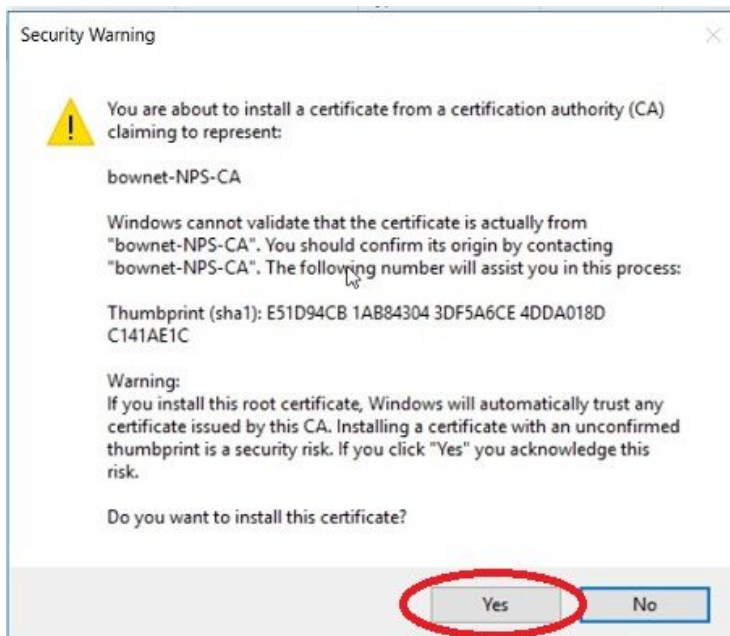

5: The select certificate store window will open. Select Trusted Root Certification Authorities and then choose OK.

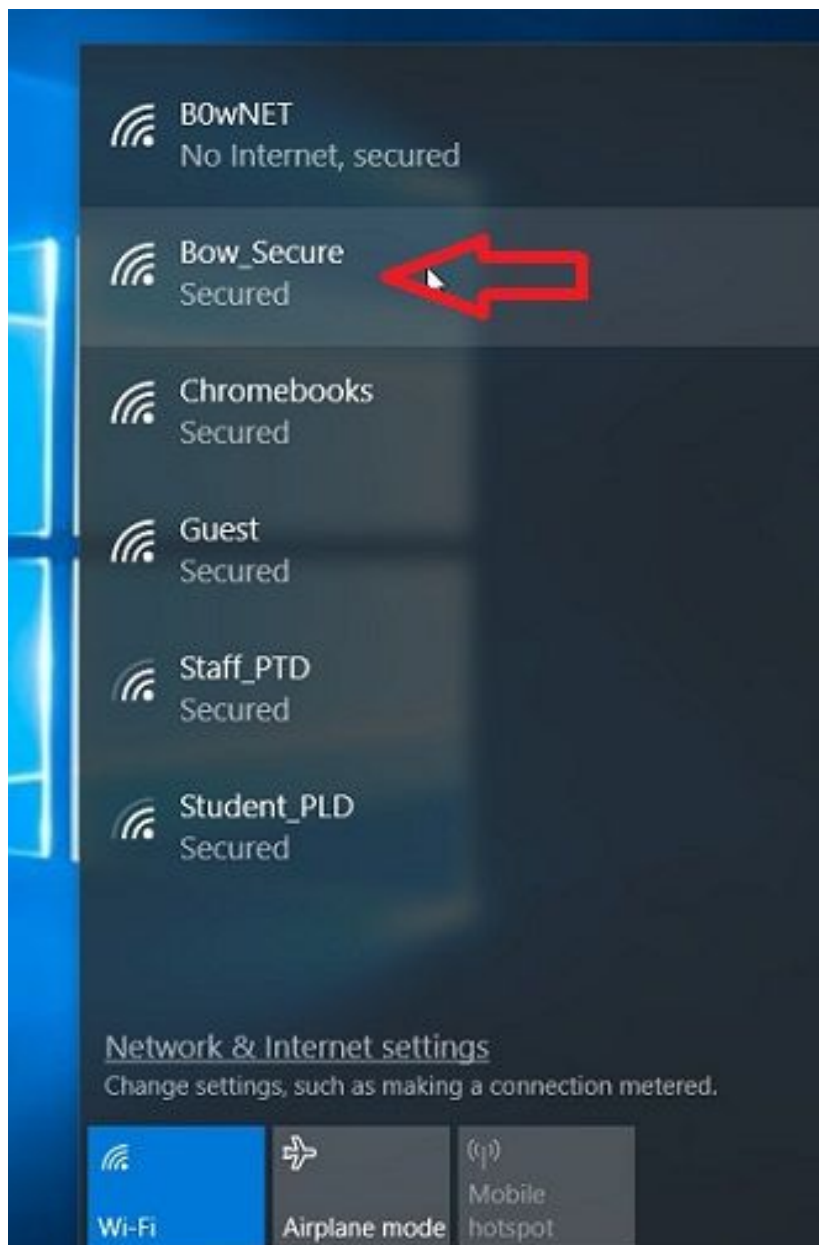

6: Verify you have selected the correct certificate store then choose next to continue. On next screen select finish to complete the installation of the certificate.

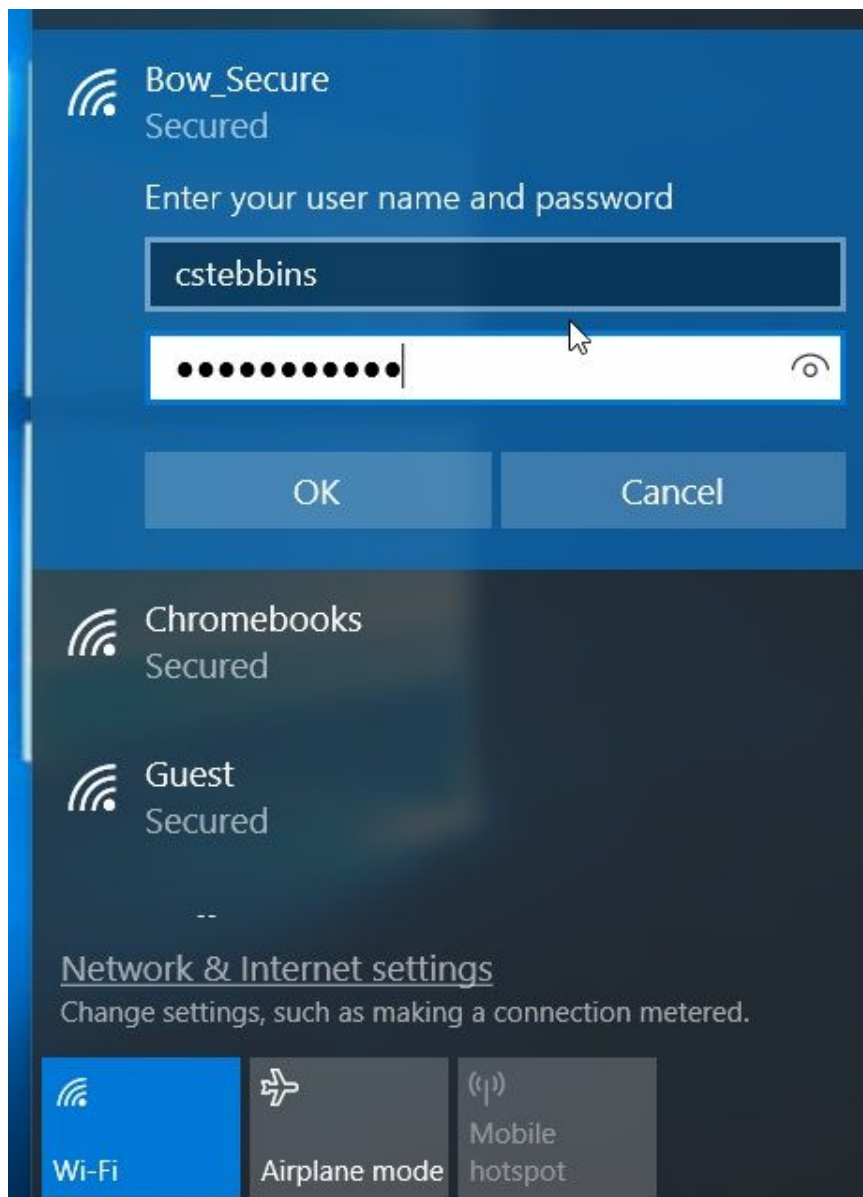

7: If you receive the following security warning choose Yes to install the certificate.

8: Now you're ready to connect to the Bow_Secure wifi network. Click on the Wifi icon in the bottom right of your taskbar and select Bow_Secure.

9: Next sign in using your Windows logon credentials and choose OK. If you do not know your Windows logon password contact IT for assistance resetting it.

10: On the continue connecting window select connect to complete your connect to Bow_Secure.
